Subject: RE: Lead Service Lines?

Hi Tatyana,

According to SPLASH, we don't have any active services made from lead in the City of San Diego. Please see below for the query script and result:

The screenshot shows the ArcGIS Explorer interface. The main window displays a tree view on the left with folders like 'Bulk Update Candidates', 'Map Selection', 'My Datasets', 'My Themes', 'Query Results', 'Scrapbook', and 'Search Restrictions'. Under 'Query Results', there is a folder 'Lead_Services_2014' containing a layer 'Water Service (Gis)'. The address bar shows the path: \Query Results\Lead_Services_2014\Water Service (Gis). A 'Design Script' dialog box is open in the foreground, showing the following details:

- Query name: Lead_Services_2014
- Dataset: Gis
- Save query:
- Buttons: Construct..., Clear
- Script text:

```
[Water Service]
where MATERIAL = "L"
and FUNCTIONAL = "YES"
and OWNERSHIP = "CITY OF SAN DIEGO"
```
- Auto-run query:
- Buttons: OK, Cancel, Help

At the bottom of the Explorer window, a table header is visible with columns: FACILIT..., INFRA. TYPE CO..., RAW w... The 'Number' column header is circled in red.

Please let me know if you have any questions.
Thank you,
Rod

Subject: Lead Service Lines?

Hi Tatyana –

As a follow up to our discussion regarding lead service lines – we found the original list of residences used in the 1992 study. There is a column that lists the type of service line – Lead or Copper. There are a pretty good number that had lead service lines as of 1992.

Is there a way to determine if these residences still have lead service lines, and if any lead service lines still exist in our system?

Thanks,
Doug
